

On August 27th, 2007 Dr. Mark Fromer was interviewed by Molly Rokasy from News 12 The Bronx about the importance of annual eye exams before the start of the school year. “Many vision problems begin at an early age in childhood, so it is important for children to receive proper eye care. Early detection and treatment are essential to preventing conditions that could potentially cause problems or vision loss,” said Dr. Fromer. He also talked about the signs parents should be aware of, and since many eye and vision conditions present no obvious symptoms children should receive annual eye exams.
