

Channel 12 News featured Fromer Eye Centers on February 19th, 2007. Dr. Mark Fromer spoke about the significant problem of visual impairment in the Hispanic community, especially in women. Hispanic women are almost twice as likely to be visually impaired compared to men due to cataract, diabetic retinopathy and glaucoma combined. “Early detection and access to eye care services could significantly decrease the burden of visual loss in this community, and it is the best defense against age-related eye diseases” said Dr. Fromer.
